Filter added to Trail 347

PTSC identified a section of trail that needed to have a filter put in place.

At the top of 347 out of the Cayuse trail head a filter was put in place just before the blind right hand curve. This will slow bikers speed when going into the corner thus making the corner more safe. The filter did not take any of the 'fun' out of the trail it added some, while forcing the biker to slow their speed when coming into the corner.

There are several other areas on 347 that have been identified for a filter. PTSC will work on those once we get feed back on how this first one went.

Please go ride, hike or bike that trail and let us know what you think. You can give us feed back on the "My Outdoor Experience" tab on the this website.

Jason trying out the filter

Note: there was a 6 second video of this that I was unable to download.

This is the link to the page (while it exists) <http://ptsc-2011.blogspot.com/2013/05/>
